FAQs

Q: What is a Mr. Slim split-ductless A/C system?

A: Mr. Slim is an energy efficient split-ductless air-conditioner and heat pump system. It has two installed parts; an indoor unit and an outdoor unit connected by refrigerant lines and wiring via a three-inch opening in the wall or ceiling. For residential systems the indoor units are wall-mounted and systems are available in cooling-only or cool/heat options. They are designed to provide comfort for the space the indoor unit is installed within. A multi-unit system is available to air-condition up to three spaces from one outdoor unit. A handheld remote controller comes with each indoor unit.

Q: What size model is right for my room?

A: As a rule of thumb, 30 Btu/h per square foot is sufficient, but we must inspect your application to discover what size is right for you.

Q: How much will a Mr. Slim system cost for my home, installed?

A: Mitsubishi's ad shows a "starting at" price for the smallest A/C unit. We will have to discover what model is right for you and, in order for us to provide a cost estimate, we must come to your home and inspect your need and application. *Is Thursday at 5:00 p.m. a good time?*

Q: Can I buy this Mr. Slim system from Mitsubishi Electric directly and install it myself?

A: Mitsubishi Electric relies on its network of trained dealers to provide the best quality service from start to finish. We will professionally install the system to ensure your safety and satisfaction and that you are guaranteed warranty coverage.
